

The complete answer to
Hard Water

from the water treatment specialists

FLECK 2750 SIMPLEX Valve

Simplex

Simplex or single column water softeners are best suited to consistent demand applications of moderate total water consumption. Regeneration is controlled by the multiport valve head assembly. Time clock and delayed regeneration meter controlled softeners are normally programmed to regenerate at 2.00am, or at a convenient period of low water use. 'Immediate regeneration' meter controlled softeners regenerate the resin column as soon as the water meter zeros out.

During regeneration the single column control valves will bypass hard water to service unless a bypass closedown facility is specified.

Generally, Simplex softeners will need to be sized to give at least one day's softened water output before regeneration.

CLACK WS1 Valve

How do Water Softeners Work?

Water Softeners work by a process known as ion exchange. The hard water passes through a high quality cation exchange resin column inside a pressure vessel. The resin removes the positively charged Calcium and Magnesium ions from solution and exchanges them for ions of Sodium. When the resin becomes exhausted it is regenerated by drawing a solution of common salt - called brine - through the column. During regeneration the calcium and magnesium ions are then released from the resin and replaced again with those of Sodium from the brine. The unwanted ions are flushed to drain along with the excess brine. Regeneration takes between 60 to 180 minutes depending on the size of the softener, and can be repeated as often as necessary.

AUTOTROL 255 Valves
(Timer & Meter Control)

Duplex

FLECK 9000 DUPLEX Valve

SIATA 132 and XP MODE Controller

Duplex softeners give a continuous supply of softened water. Duplex systems use two resin columns, one in service, the second on standby. The water flow to service is metered and when the service column is exhausted, the control valve automatically switches, putting the second unit on line. The exhausted resin in the first column is then regenerated and remains on standby until the second column is exhausted, then the valve switches back to the first column again. Duplex softeners are normally sized to give one regeneration per column per day, but each column can be regenerated more frequently if required. Parallel run systems with both vessels on line at the same time are available.

Valve Size

Valve sizes are determined according to the required flow rates and the volume of resin in the vessel. With very hard water the valve may need to be sized larger than the flow rate would suggest to cope with the extra resin required.

Pipe connection sizes range from $\frac{3}{4}$ " to 3" for standard valves providing flow rates up to $45\text{m}^3/\text{hour}$. For higher flow rates water is piped directly to the vessel with water passing through the central valve only during regeneration.

Capacity

The capacity of a particular softener is a function of the amount of resin in the column, the hardness of the water supply and the amount of salt used at each regeneration. It is most efficient, to regenerate frequently with a minimal amount of salt. The tables show the performance of our softeners at a typical hardness of 300 ppm.

FLECK 2900 SIMPLEX and DUPLEX Valve

Connections: 1" BSP inlet & outlet, 1/2" hose barb drain																					
Fleck 2510	Maximum Flow Rated at 5.40m ³ per hour																				
Connections: 1" BSP inlet & outlet, 1/2" hose barb drain																					
Fleck 2750	Maximum Flow Rated at 6.80m ³ per hour																				
Connections: 1" BSP inlet & outlet, 1/2" BSP drain																					
Fleck 2850	Maximum Flow Rated at 12.50m ³ per hour																				
Connections: 1.5" BSP inlet & outlet, 1" BSP drain																					
Fleck 2900	Maximum Flow Rated at 23.00m ³ per hour																				
Connections: 2" BSP inlet & outlet, 3/4" BSP drain																					
Fleck 3900	Maximum Flow Rated at 48.00m ³ per hour (Higher flow options available)																				
Connections: 3" BSP inlet & outlet, 2" BSP drain																					
Autotrol 255	Maximum Flow Rated at 3.80m ³ per hour																				
Connections: 1" BSP inlet & outlet, 1/2" BSP drain																					
Autotrol 268	Maximum Flow Rated at 6.00m ³ per hour																				
Connections: 1.75" NPT inlet & outlet, 3/4" BSP drain																					
Autotrol Magnum Cv	Maximum Flow Rated at 18.00m ³ per hour																				
Connections: 1.5" or 2" inlet & outlet, 1.5" BSP drain																					
Siata 132	Maximum Flow Rated at 7.00m ³ per hour																				
Connections: 1" BSP inlet & outlet, 1/2" hose barb drain																					
Siata 230	Maximum Flow Rated at 10.00m ³ per hour																				
Connections: 1.5" BSP inlet & outlet, 1/2" hose barb drain																					
Siata 250	Maximum Flow Rated at 21.00m ³ per hour																				
Connections: 2" BSP inlet & outlet, 1" BSP drain																					
Siata 360	Maximum Flow Rated at 45.25m ³ per hour (Higher flow options available)																				
Connections: 2" BSP inlet & outlet, 1 1/2" BSP drain																					

PLEASE NOTE: When sizing softeners, please ensure that the valve being used is able to handle the flow rate required by the system. The solid bars denote which size softeners the respective valves can be installed on. All data is approximate and may vary due to site conditions and installation constraints. It should therefore be used as a guide only and suitable over capacity included to facilitate effective operation. Maximum flow rates are based on manufacturers data, at a pressure drop of 1.8 bar under test conditions, and as such may not always be replicated on site.

Domestic & Commercial Softeners

The All New
Wizard Softener

We are also able to supply a range of domestic & commercial softeners for use in applications such as dishwashing, catering, laundry, washroom and hospitals. These range from small under table units capable of treating the water for a specific piece of equipment, through to whole of house units capable of treating the water for families of up to 10 people!

A range of hot water softeners is also available, along with a series of break tanks and booster sets to cover all your water needs in the commercial sector.

Other Products in our Range

Compact
RO C4000

We are able to supply a full range of water treatment equipment including Reverse Osmosis Systems (pictured), iron and manganese removal filters, carbon filters, backwashing sediment filters, pH correction systems, demineralisers and the full range of resin and filter media.

FOR DETAILS ON WATER SOFTENING OR ANY OF THE ABOVE MENTIONED EQUIPMENT PLEASE CONTACT US ON THE TELEPHONE NUMBER BELOW.
